▶ Huge swing fun like never before because two rotations overlap

The Edelwies Nature and Leisure Park in the Bavarian Forest wanted to present a swing to its visitors that would primarily appeal to the whole family.

Super Swing M

During the search for the ideal project partner, both Managing Directors Rudolf Steinbauer and Dr. Andreas Friedrich quickly found what they

were looking for at Ride Engineers Switzerland, as they had already had good business experiences with current RES employees. The

basic principle of the swing designed as a result, is indeed a real novelty with a new combination of ride experiences. The idea of two rotating drive arms, each combined with a free-swinging passenger gondola, convinced the operators from the start, and the attraction was commissioned immediately. But after delays in the approval process and due to the well-known Corona circumstances, the opening of the "Super Swing M" took place almost a year later than planned.

The "Super Swing M" is a tower construction equipped with two swinging arms, each with two rows of seats, accommodating five persons per row (back to back). The individual lap bars, complying with today's safety standards and ensure a pleasant and safe ride. The height restriction for children accompanied by adults of 1.05 metres originally set by RES was corrected to 90 cm during TÜV ap-

proval inspections, which means a clear added value for the park operator. The space required for the swing, which is 18 metres high in total, is 16 by 18 metres; the maximum flight height is 12 metres. With a ride time of 90 seconds, the theoretical capacity is 480 people per hour.

Whilst the arms swing in opposite directions to each other, an additional joint provides the exciting feeling of free falling downwards, or a feeling of lifting off before reaching the upper end of the ride. The result is a completely new swing feeling and is guaranteed fun for the whole family! Park visitors as well as park operators are equally enthusiastic.

The new highlight among family rides led to the first award for this ride type, which received a European Star Award in the category "Best New Rides 2021". We would like to congratulate all those involved once again! In addition to the two-arm "Super Swing M", RES also offers a one-armed "S" version with

half the capacity. From the total of three RES rides sold, the first two were thus realised at the park: The "Super Swing M" and a "Family Dual Wheel" were opened in 2021; the third ride will follow in spring 2022. We look forward to this attraction with eager anticipation. ■
